

KS4/5 – Beast Creator

Parent information

A bug, a creepy-crawly, a beast. He'll tickle your skin then go in for the sting. Arachnids, insects, molluscs and myriapods, hiding in nooks and beneath darkened rocks. Come search for these minibeasts, and let's sort them out. How many legs? How many wings? Who does it eat and who eats it? Can you classify it? Can you draw it or make it? Build a bug hotel or a wonderful wormery, then watch them wriggle and burrow, mixing earth as they go. Discover where in the world you'll find the deadliest beasts. Perhaps the *Vespa mandarinia japonica* is the one that you fear? Why not become a beast creator? Selectively breed a killer predator that saves the world from the super strong aphid. You'll be a hero. 'There was an old lady who swallowed a fly. I don't know why she swallowed a fly. Perhaps she'll die.'

Memorable experience

Visit a local butterfly or tropical house to see and handle a range of minibeasts (invertebrates). Take photographs, make notes and annotate drawings to record observations. Listen carefully to talks and explanations given by specialists, asking questions to clarify their understanding. Think of questions to research back in the classroom.
